

Flameless CREMATION

The natural, gentle, & eco-friendly alternative to fire-based cremation

About Flameless Cremation

Flameless Cremation, scientifically known as Alkaline Hydrolysis, uses WATER as opposed to fire and is the most NATURAL selection that can be made when making funeral arrangements.

By using a combination of 95% water and 5% alkalinity, Flameless Cremation mimics the same process as if the body were to be directly laid to rest in the ground, only accelerated.

Flameless Cremation is offered by funeral homes across the United States, Canada, and Europe. It is even used by Medical Schools for individuals who have been donated to science, including the world-renowned Mayo Clinic.

Common Questions

Do I receive anything back after the process is completed?

Yes. At the end of the Flameless Cremation process, mineral ash is left behind which are placed in an urn and returned to you.

Does Flameless Cremation use acid?

No. The alkalis used in the process are all-natural material. They are the same substances that are used in everyday shaving creams, body washes, and other cosmetic compounds.

Can I have a traditional visitation or funeral?

Yes. By utilizing embalming and the use of rental casket, it is possible to have your loved one's body present for the visitation/funeral service. Once the services are completed, the Flameless Cremation can take place.

How long does the Flameless Cremation process take?

Once all the authorizations are completed, your loved one's urn should be returned within 1-2 days.

Environmental Advantages Flameless Cremation

Because Flameless Cremation is not a combustion process, it is more environmentally-friendly than flame-based cremation. The total carbon footprint is 18 times less than fire-based cremation.

Flameless Cremation Reduces:

- Natural Gas usage by **90%**
- Electricity usage by **66%**
- Carbon Dioxide emission by **90%**

Flameless cremation is 100% Mercury-free.

What Are The Advantages?

- ✓ A different choice when it comes to making final arrangements for your loved ones.
- ✓ No harsh heat or open flame.
- ✓ 20% more mineral ash remains are returned in the urn. The remains are 100% free of carbon discoloration.
- ✓ Medical devices, such as pacemakers, do not have to be removed.
